## Problem Statement

Create React native application to demonstrate 3 screens
1 screen - A Slider button which could be swiped up or down. (Customer mode or Merchant mode)
2 Screen - NFC data read and review screen
3 Screen – Payment Successful Confirmation Screen
=====================================================================
Note:

I have tried to make the application using 2 methods
1. Simply using Stripe and Expo
   - Run application on ios only
   - Code is attached
   - Output Video is also attached
   - At the end of the expo explanation(refer document stripe and expo) Expo link[directly run] for project is pasted
2. Google Pay
